Internet

High speed. Enterprise grade.
Business internet you can rely on.

caznet

Adelaide's specialist provider of enterprise grade network, VoIP, private cloud and hosting services

Internet

Fast and reliable business internet is vital
It's your gateway to the world, enables your customers to reach you and empowers your people to operate efficiently with access to what they need, when they need it. Designed from the ground up for business, Caznet Business Internet gives you an enterprise grade connection to the world through our fast, reliable and high capacity network delivering a consistent and quality experience.

Our network has been built with capacity, reliability and security in mind to ensure it delivers on our promises… day and night, all day, every day. You'll have a dedicated and uncontended connection to our MPLS core network and on to the rest of the Internet backed by 24x7x365 proactive monitoring and a professional Adelaide based support team.

Downtime isn't an option for most businesses, so we've engineered our Internet services to allow us to offer fully redundant connections and we back them with a strong SLA, real time monitoring and automatic failure over. We're peered with all the big content providers (like Microsoft, Google, YouTube, Amazon, Netflix and many more) and adhere to strict minimum free capacity levels so that your online experience is second to none.
